

Fluorescence 3 User Guide

hey there, welcome to **FLUORESCENCE 3**

this is to let you know all the amazing new features

myOpenVFD is now **Fluorescence App**. you can use it to control to FLUORESCENCE, and, more importantly, upgrade your clock to **FLUORESCENCE 3** for free. it runs on both windows and macos if you have purchased the *bluetooth upgrade kit*, you can also control **FLUORESCENCE 3** over bluetooth besides usb.

everything you need to new

- we just made function keys more intuitive in FLUORESCENCE 3. use
- **F1** to cycle between time, date, stopwatch and brightness set menu
 - **F2** changes the light pattern. long press to toggle shuffle
 - **F3** changes the character of the light pattern
 - **F4** sets the dot pattern. long press to switch between 24h and 12h
- shhhh here's a little secret for you... in stopwatch mode, long press F4 to save all settings!

brightness and night shift

- you can adjust brightness and night shift in the brightness set menu
- **F2** to change the display brightness
 - **F3** to change the brightness of the lights
 - **F4** to schedule night shift. we came up with five sleeping profiles:
off, yogi, early bird, average person, night owl, university student
 - **F1** to leave. in normal operation, long press to turn off night shift

we've got you covered. if there is anything you want to talk about with us, please reach out to our customer service at
